(a) Linear patch test, $u = \alpha x$
Cube (quadratic)
Sphere
Spheroid $\kappa = 2$
$\|t_h - t\|_{L^2(\Gamma)} / \|t\|_{L^2(\Gamma)}$
integration points per direction, n
(b) Point-load solution: quadrature
6 elements
24 elements
96 elements
384 elements
$\|t_h - t\|_{L^2(\Gamma)} / \|t\|_{L^2(\Gamma)}$
integration points per direction, n
(c) Point-load solution: h-refinement
slope 5
HSBIE, $n = 10$
traction interpolation
$\|t_h - t\|_{L^2(\Gamma)} / \|t\|_{L^2(\Gamma)}$
element size h/h_0 (6, 24, 96, 384 elements)
